

PROJECT PROFILE

United Methodist Church

PROJECT

United Methodist Church
29 Carver Road
Plymouth Ma.

CONSTRUCTION MANAGER

Bustin & Associates
23 Manters Point Drive
Plymouth Ma.

DETAILS

Sona-Spray"fc" White
3,500 Square Feet
.5" Thickness

This simple but effective application of Sona-Spray was retrofitted over a three day period without alterations to lighting or electrical fixtures. Unfortunately during construction of this new facility, acoustics were not a major concern, it was not until the sound system was tested did designers realize the severity of the problem. Applied at .5", Noise Reduction Coefficient of .65, the Sona-Spray has lowered the reverberation time and made gatherings an enjoyable experience for the parishioners of the United Methodist Church. Once again the application was 30% more costly due to the retrofit application. For more information regarding Sona-Spray"fc" call 508-678-1118 or visit our website at www.atiincoorporated.com.
